EXERCISE: Create HTML 5 website template and save to it...

Goal:

1. Create an HTML 5 website template
2. Add a tooltip to the `span` tag that will show information about when the "Kitty Snacks" company was founded. When you hover over "Kitty Snacks" it should display the information "Established in 2022".

Steps to follow (tips):

Step **1**: Create a new file and save it with the .html extension. Name it "kitty-snacks".

Step **2**: Declare an HTML5 document by typing `<!DOCTYPE html>` at the very beginning of the file.

Step **3**: Then add the `<html>` tag, which will serve as the main element for the entire document.

Step **5**: Within the `<html>` tag, add the `<head>` tag. This tag will contain information about the document.

Step **6**: Within the `<head>` tag, add the `<title>` tag. The text within the <title> tag will appear on the browser tab for the website. Give the title to the page: "Kitty Snacks"

Step **7**: After the `<head>` tag, add the `<body>` tag. This tag will contain the content of the website that will be displayed in the browser window.

Step **8**: Within the `<body>` tag, create a `<span>` tag and give it the title attribute: "Exists since 2022"

Solution below:

```
1.  <!DOCTYPE html>
2.  <html lang="en">
3.  <head>
4.      <title>Kitty Snacks</title>
5.  </head>
6.  <body>
7.      <span title="Established in 2022">Kitty Snacks</span>
8.  </body>
9.  </html>
```
